Art Unit: 2613

1. The following are pointed out in order to promote compact prosecution. Although the applicant is not required to correct them since the time limit is one month, they will be brought up in the next action.

2. In claim 2, "said data-carrying signal" lacks antecedent basis. None of the figures show a CMY signal produced as claimed in claims 7, 15 and 22. None of the figures show a laser diode of claims 19 and 26.

This application contains claims directed to the following patentably distinct species:

Species I) figure 2

Species II) figure 3

The species are independent or distinct because figure 1 teaches combining the signals over a single fiber. Figure 3 teaches sending the signals over separate fibers and sending a white light which is reflected to verify connection.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1-4, 6-10, 28 and 32-34 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Art Unit: 2613

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions have acquired a separate status in the art due to their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
